

Saurav Srivastav

Full-Stack .NET & Angular Developer — Database Specialist

+91 7003143405 · srivastavsaurav22@gmail.com · [sauravsrivastav22.github.io](https://github.com/sauravsrivastav22) · linkedin.com/in/saurav-srivastav-9b2bb2147 · github.com/SauravSrivastav22

SUMMARY

Full-Stack Developer with **5+ years** delivering enterprise applications on **.NET Core, Angular, and Microsoft Azure** for global clients including **Haier, Fonterra, Arla, and Carrier**. My signature strength is **database engineering** — I personally own high-performance schema design, query optimization, and cross-database integration, including a reporting query I cut **from ~40s to under 2s** and a **SQL Server ↔ PostgreSQL pipeline syncing 1M+ records**. Backed by **20+ open-source projects** on GitHub and a **live portfolio** (sauravsrivastav22.github.io) demonstrating my .NET, Angular, and SQL work end-to-end.

CORE STRENGTHS

- **Backend (.NET):** .NET Core, C#, ASP.NET MVC, Blazor, Entity Framework Core, Microservices, RESTful APIs
- **Frontend (Angular):** Angular, TypeScript, reusable component architecture, responsive UI
- **Database Engineering:** schema design, query & index optimization, stored procedures, DB-to-DB pipelines, SSIS
- **Cloud & DevOps:** Microsoft Azure, Docker, CI/CD pipelines, containerized deployments

WORK EXPERIENCE

Software Developer — WIN Information Technology Pvt Ltd

Oct 2021 – Present

- **Independently owned the data-integration layer end-to-end**, architecting **DB-to-DB pipelines** between SQL Server and PostgreSQL that sync **1M+ records** reliably across enterprise systems.
- **Redesigned indexing and eliminated N+1 query patterns** on high-volume reporting tables (EF Core + T-SQL), cutting a core report's runtime **from ~40s to under 2s**.
- Designed and deployed **microservices-based RESTful APIs on Microsoft Azure**, containerized with **Docker** and shipped through **CI/CD pipelines** for reliable, repeatable releases.
- Built full-stack modules with **.NET Core, Angular, and Blazor** for global clients including **Haier, Fonterra, Arla, and Carrier**.
- Contributed to and now **provide live production support for 40+ enterprise applications** as part of an Agile delivery team, across healthcare, ERP, and integration domains (.NET Core, ASP.NET MVC, Angular, Blazor, SSIS, SQL Server, PostgreSQL, Oracle).

Associate Software Engineer — Indus Net Technologies, Kolkata

Mar 2021 – Sep 2021

- Developed full-stack features using **Angular, Node.js, and MongoDB**.
- **Tuned database queries to cut API response times by ~25%** and integrated RESTful APIs.

KEY PROJECTS

HMIS Empower — Haier Market Intelligence System (WINIT Client)

Deployed on-site at Haier for ~2 years, delivering this web + mobile platform end-to-end for 1,000+ field users (attendance, sales orders, real-time reporting).

- Designed and **optimized the SQL database schema** powering sales, inventory, and reporting modules.
- Integrated HMIS with the **Distribution Management System (DMS)**, improving data accuracy and reducing manual processing.

- Implemented **Firebase + FCM** for real-time sync and push notifications; scaled to **2x user growth with zero downtime**.

AI-Rasheed Food (Yaumi)

Enterprise ASP.NET MVC application serving 500+ daily users.

- Built sales, pricing, promotions, and product-sequencing modules.
- Engineered an order & billing system processing **1K+ transactions/month**.
- Developed inventory features (truck stock, warehouse tracking, routes).

AI-Powered Cross-Platform Application

- Built a cross-platform (Android/iOS) app with a **microservices .NET Core + PostgreSQL** backend on **Azure**, handling **10K+ API requests/day**.
- Automated admin workflows using **SQL stored procedures and scheduled jobs**; containerized with **Docker** and automated releases via **CI/CD**.

Fonterra

- Built scalable **Angular + .NET Core / SQL Server** web apps with dynamic dashboards and reporting.
- Implemented **role-based access control (RBAC)** and a reusable component architecture.

BloodFang — AnimeBox (Personal Project) [Live Demo](#) · [GitHub](#)

Full-stack React 19 (Vite) anime browser with search and genre-based filtering.

- Built an **Express (Node.js) API** that aggregates data from **multiple external APIs**, keeping the frontend clean and CORS-free.
- Implemented **React Router** navigation, **Firebase** integration, and graceful error handling for unreliable upstream providers.

SKILLS

Backend (.NET) — .NET · .NET Core · C# · ASP.NET MVC · Blazor · Entity Framework Core · Microservices · RESTful APIs · Node.js

Frontend (Angular / React) — Angular · React · TypeScript · JavaScript · jQuery · HTML5 · CSS3

Databases & Data — SQL Server · PostgreSQL · Oracle · T-SQL · Stored Procedures & Jobs · Query Optimization & Indexing · EF Core · DB-to-DB Pipelines · SSIS · ADO.NET

Cloud & DevOps — Microsoft Azure · Docker · CI/CD Pipelines · Git

Tools — Visual Studio · SSMS · Postman · IIS

EDUCATION

B.Tech, Computer Science & Engineering — JIS College of Engineering, Kalyani (2016 – 2020)

Intermediate — Kamla Rai College, Gopalganj (2014 – 2016)

CERTIFICATIONS

- **Data Analysis Using Python** — IBM (Coursera)
- **Google Data Analytics** — Google (Coursera)
- **Data Science using Python & R** — Webtek Labs
